

## Forward

C-<right>, C-<left> too,  
but conflict in OSX Lion

Slurp

(foo bar |) (baz)  $\xrightarrow{C-}$  (foo bar |(baz))

Barf

(foo bar |(baz))  $\xrightarrow{C-}$  (foo bar |)(baz)

## Backward

C-M-<right> and C-M-<left>  
work too

Slurp

((foo) (bar | baz))  $\xrightarrow{C-}$  ((foo) bar | baz)

Barf

((foo) bar | baz)  $\xrightarrow{C-}$  (foo) (bar | baz)

split

(hello | world)  $\xrightarrow{M-S}$  (hello) (world)

join

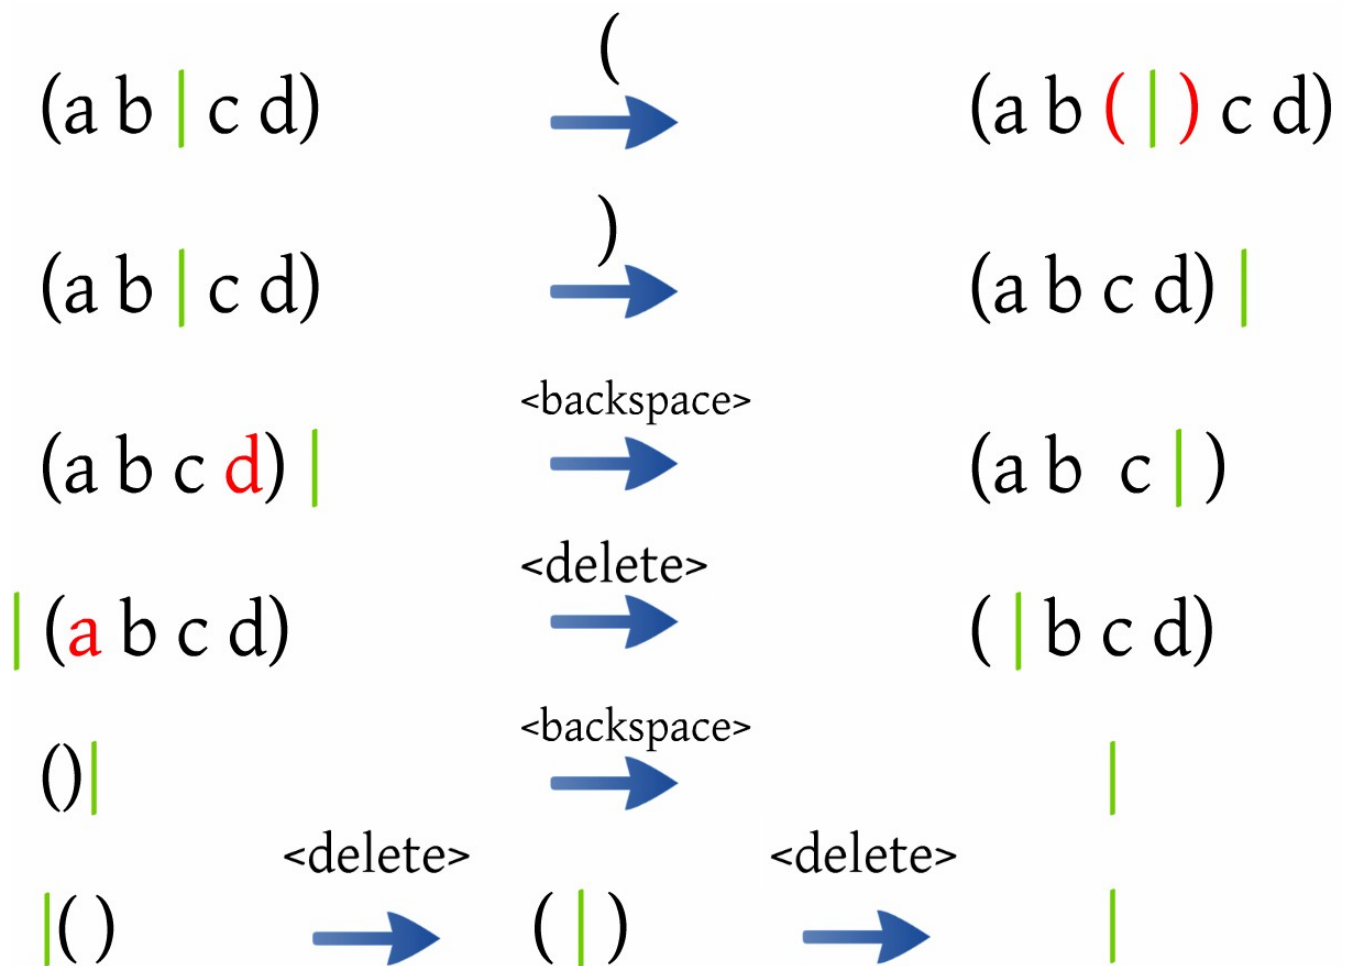

(hello) |(world)  $\xrightarrow{M-J}$  (hello | world)

wrap-around

(foo | bar baz)  $\xrightarrow{M-}$  (foo |(bar) baz)

splice

(foo (bar | baz) quux)  $\xrightarrow{M-s}$  (foo bar | baz quux)

splice killing backward M-`<up>`  
`(foo (let [ x 5 ] | (sqrt n)) bar)` → `(foo | (sqrt n) bar)`

splice killing forward M-`<down>`  
`(a (b c | d e) f)` → `(a b c | f)`
